

## The LifeSpan GuardianKey Technology

This easy-to-use device helps your patients and their families keep their medical records up to date, saving time and money for Physicians and their staff.

### The Features of GuardianKey Technology:

- A password-protected, digitalized copy of a person's entire health record, accessible through a computer's USB port. A file on the flash drive device explains the device to the provider organization in case the patient is not alert enough to direct its use. The USB device is carried by the subscriber on his key-chain, as a wristband, or on a lanyard.
- Documents can be viewed and printed, but not changed. Uses the Adobe Acrobat Printable Document Format (PDF), a universally accessible display for any kind of printable document.
- The service includes an in-depth interview with the subscriber to document the complete health history.
- Service includes complete acquisition and scanning of those records onto the device, including a review and reconciliation of the subscriber's health records.
- Documents scanned include a summary of the subscriber's health history, demographic and contact information, a contact list of all providers and the pharmacy, and a medication list. An authorization for the release of medical information (a HIPAA form) and Living Will are included. Supporting documents including the subscriber's EKG and any lab, radiology or physician reports that support the narrative summary.
- A toll-free hotline is offered in case the subscriber does not recall his password, or is not alert enough to provide the password. The subscriber agreement authorizes life-saving access to the subscriber's medical records in the event of emergency.
- The service is offered on a subscription basis from year-to-year. Records are updated on an ongoing basis, and a toll-free number is provided to the subscriber to answer questions that include any issue regarding the subscriber's health, the meaning of test results, etc.

- If the subscriber does have a health emergency, ongoing care management services are offered to the subscriber and the family at a rate of \$150 per hour. These services include health coordination and advocacy by a Masters' prepared or subspecialty certified RN, including attending doctor appointments, crisis counseling, arranging for institutional transfers, finding expert providers to address troubling health issues, interfacing with insurance companies or attorneys, etc.
- The subscriber is provided with their own flash drive device, a hard copy of the records, a wallet identification card, and a sticker for their automobile window to alert EMS providers that the health record is available in the event an emergency occurrence.

### The Targeted Group includes:

- Those with chronic or catastrophic illness or injury
- The elderly and their families
- Employer groups that have high-value employees that travel frequently or travel overseas
- Provider groups that service those with chronic illness

### The Impact and Benefits of the Technology:

- The process of reviewing the health history with the client subscriber and matching them against the medical records allows the patient and the family to do long term planning regarding health issues and the financial concerns that attend them.
- The subscriber does not have to remember all the details regarding his health history or medication regimen.
- The device prevents medication errors by detailing the subscriber's prescription and non-prescription drugs, who prescribed the medication and why.
