

## Upper Chesapeake Health System Chooses Medequip for New Cancer Center

March - 2011

Blue Bell, PA – The Upper Chesapeake Health System (UCHS), through a competitive proposal process, has selected Medequip International as the equipment planner for the new Bel Air, Maryland Cancer Center.

“UCHS recognized our broad and deep cancer center experience with some of the most prestigious facilities in the world,” said Joseph McCloskey, Medequip International Project Director. Mr. McCloskey continued, “We are by far the most experienced cancer facility equipment planner in North America with over 10% of National Cancer Institute (NCI) designated facilities as our multi-project, repeat clients. That type of experience should give any client the confidence to trust us with their program.”

For the new Facility, expected to be completed in 2013, Medequip International will provide all of the medical equipment planning, budgeting, procurement, and install of new equipment. To help facilitate a faster and more efficient project, Medequip International will also be providing Building Information Modeling (BIM) support using Autodesk Revit®. Medequip International will update design and construction drawings with the medical equipment to make for a more true and accurate model.

John Mohan, a project leader for the equipment consulting portion of the project commented “The Upper Chesapeake Health Cancer Center will benefit from our equipment experience as well as our experience with Revit technology, which goes back several years, before Revit was widely known and utilized in the industry. But in the end, it is about people, who make a project successful. And we are happy UCHS chose us to be part of that team.

Medequip International is the pioneer in medical equipment planning and management services. Founded in 1977, and with a global client base, Medequip International has successfully completed over 1,500 projects, around the world. Service offerings include all phases of equipment planning and management but also procurement, installation, transition management, and design and architectural support services.
